

# SPECIAL NEEDS CHILDREN'S LEARNING CENTRE

## ABC (AUTISM BEHAVIORAL CENTRE)

### Specifically Catering To Individual Learning Requirements Of Special Needs Children

Not all children learn the same way, and at ABC (Autism Behavioral Centre), therapists use the strengths/interest based model to teach. Here, at the largest ABA 1:1 (Applied Behavior Analysis) Center in Malaysia, the programs are individualised according to the child's unique needs and level to provide better support in behaviour management and regulation. Intensive ABA (applied behaviour analysis) therapy is applied, whereby it is the "gold standard" in autism treatment being the only research and evidence supported method of intervention. ABA also benefits children with speech delays, ADHD, ADD, behavioral challenges and social challenges. International standards of intervention as adhered to, and is supervised by a Board Certified Behavior Analyst (BCBA) and Board Certified Assistant Behavior Analysts (BCaBA). ABC primarily provides centre-based and home based ABA programs which have the ultimate goal to improve speech and communication skills, social skills, socially acceptable behaviors, social skills, school readiness skills and life skills/independence. The centre also conducts training for parents and free trainings for teachers in preschools, as well as Intensive Holiday Programmes. Parents who enrol their children at ABC have found the centre to be flexible, with therapists who are generous with their time and resources.
