

# BEST SPECIAL NEEDS CHILDREN'S LEARNING CENTRE

## ABC (AUTISM BEHAVIORAL CENTRE)

### International Standards Of Intervention For Special Needs Children

Established in December 2016, Autism Behavioral Centre (ABC) specializes in individualized support for children with needs. The award-winning centre has brought international intervention standards to Malaysia by implementing the renowned PaTTAN (Pennsylvania Training and Technical Assistance Network) Technology developed by Dr. Amir Dipuglia and Mr. Mike Miklos, and supervised by a Board Certified Behavior Analyst. ABC provides centre-based and home-based 1:1 ABA (Applied Behavior Analysis) intervention. Apart from providing the needed support in behaviour management, ABC's ultimate goal is to help special needs children improve their communication skills, behavior, social skills, and school readiness skills. Through the dedication and implementation of the science of ABA to teach, children who start therapy at ABC with maladaptive behaviors (kicking, crying, head-banging, shouting, etc.) have been found to show vast improvements, where these behaviors are quickly unlearned as they begin to learn effectively, with many moving into mainstream/regular schools. ABC is indeed our very own home-grown name synonymous with quality intervention for special needs children.
